

# Environmental Strategies Ltd Declaration

## Professional Peer Review Verification

---

In our opinion, there is no evidence that the carbon footprint(s) developed by Portakabin Limited is not a fair representation of the carbon emissions associated with the materials, manufacture and transportation of the ALTA module product range.

Portakabin Limited have calculated the ALTA Module A1 – A4 lifecycle impact of carbon emissions in kilograms of carbon dioxide equivalent (kgCO<sub>2</sub>e), often referred to as the embodied carbon of the product. The boundary has been extended beyond the cradle-to-gate carbon impact of the product, to include estimated emissions associated with delivery of the ALTA range to the customer site (A4). The carbon footprint(s) therefore cover a cradle-to-customer gate boundary.

Data presented by Portakabin Limited for verification was extensive, and included Bill of Material weights, information sourced from suppliers, in-house production and transport data, and carbon conversion factors from credible sources. Any assumptions made, or exclusions applied, within the boundary of the footprint(s) are stated.

Whilst the carbon footprint can only ever be an “estimation,” the kgCO<sub>2</sub>e is believed to be materially correct, following this professional peer review verification process. A series of sampling records have been retained for audit purposes. The primary and secondary data accuracy and the overall embodied carbon analysis remain the responsibility of Portakabin Limited.

If provided with any information affecting the accuracy of the footprint(s), Environmental Strategies Ltd will review this verification statement.

Helen Sprakes, Director, Lead GHG Verifier
