

Environmental Strategies Ltd Declaration

In our opinion, there is no evidence that the carbon footprint inventory for Nc'nean is not materially correct and no evidence that it is not a fair representation of the carbon emissions associated with the company's activities within the stated boundary and emissions categories for the period 1st April 2024 – 31st March 2025.

The 0.3% reduction in Scope 1 emissions since the previous year and the offsetting of residual emissions into a sustainable afforestation project, supports our verification to a limited level of assurance of the company's net zero status for Scope 1 and Scope 2 of emissions, as defined in *ISO Net Zero Guidelines - IWA 42:2022* criteria.

Whilst the carbon footprint can only ever be an "estimation," of the company's tCO₂e our limited level of assurance verification indicates that it is materially accurate based on the requirements of *ISO 14064-3:2019 Specification with guidance for the verification and validation of greenhouse gas statements*. The verification process ensured evidence was sufficient and appropriate.

The primary and secondary data accuracy and the overall carbon inventory remains the responsibility of Nc'nean.

If provided with any information affecting the accuracy and validity of the footprint, Environmental Strategies Ltd will review this verification statement.

A handwritten signature in black ink that reads "H. Sprakes".

Helen Sprakes, Director, Lead GHG Verifier
