

Environmental Strategies Ltd Declaration

In our opinion, there is no evidence that the carbon footprint inventory for Ideal Boilers Limited is not materially correct and no evidence that it is not a fair representation of the carbon emissions associated with the company's activities within the SECR criteria for the period 1st January 2025 – 31st December 2025. The best practise materiality threshold for SECR reporting, (maximum 2% omissions), has been met.

Whilst the carbon footprint can only ever be an "estimation," the tCO₂e is believed to be materially accurate, following this verification process based on the requirements of *ISO 14064-3:2019 Specification with guidance for the verification and validation of greenhouse gas statements*. The verification process ensured evidence was sufficient and appropriate to provide a limited level of assurance against the SECR criteria. The primary and secondary data accuracy and the overall carbon inventory remains the responsibility of Ideal.

If provided with any information affecting the accuracy of the footprint, Environmental Strategies Ltd will review this verification statement.

Helen Sprakes, Director, Lead GHG Verifier
